Allowable Subject Matter

1. Claims 1-7, 9-23 are allowed.
2. The following is an examiner's statement of reasons for allowance:

[Claim 1]: A CCD pulse generator comprising: a digital delay type CCD control signal generating section for finely delaying a transfer signal for driving a CCD, thereby generating a plurality of delay signals, and changing selection of the plurality of delay signals, thereby generating a CCD control signal corresponding to set rise and fall timings;

an inverted/non-inverted signal generating section for generating an inverted signal and a non-inverted signal of the CCD control signal;

a selection section for selecting the inverted signal and the non-inverted signal of the CCD control signal;

an output section, having an output enable function, for outputting the signal selected by said selection section; and

an output signal condition setting section for setting pieces of condition setting information that determine operations of said respective sections, said output signal condition setting section being formed by a register which is controlled by data, clock, and load control signals.

[Claims 7 and 18]: The reasons for allowance are similar to claim 1.

Discussion of prior art:

- a. US Patent # 5,847,588 discloses a clock generator 18 (figure 7) having inputs load, N and clock. Figures 2 and 3 also disclose a delay section (38). However Mcdermott fails to teach an output signal condition setting section for setting pieces of

condition setting information that determine operations of said respective sections, said output signal condition setting section being formed by a register which is controlled by data, clock, and load control signals.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
